

Section 7

Stainless Steel 316 Threaded Fittings

Edition 3

[7] STAINLESS STEEL 316 THREADED FITTINGS

Specifications

About Stainless Steel - Stainless steel can be defined as a steel alloy that has a minimum chromium level of 11% of its mass. Stainless steel fittings are used when the properties of steel and resistance to corrosion are required.

Applications - Stainless Steel Fittings are most suitable for marine, pumping, commercial, domestic chemical and irrigation applications.

AAP '150lb' stainless steel fittings are made from grade 316 stainless steel. 150lb refers to the maximum working pressure/temperature of 150psi saturated steam.

Applicable Standards

AS 1722.2 -	Pipe Threads of Whitworth Form (Fastening thread)
ASTM A351 -	Standard Specification of Castings, Austenitic for pressure-containing parts
ASTM A182 -	Standard Specification for forged or rolled alloy and stainless steel pipe flanges, forged fittings, valves and parts for high temperature parts
ISO 4144 -	Pipework - Stainless Steel fittings Threaded in Accordance with ISO7 - 1
